Treating Excrement.

(This Invention received Provisional Protection only.)

PROVISIONAL SPECIFICATION left by Ludwig Schad at the Office of the Commissioners of Patents, with his Petition, on the 26th April 1870.

I, LUDWIG SCHAD, of Warrington, in the County of Lancaster, 5 Chemist, do hereby declare the nature of the said Invention for “IMPROVEMENTS IN TREATING HUMAN EXCREMENT,” to be as follows :—

This Invention consists in an improved method of rendering human excrement innoxious. I place under the privy, closet, or other place a vessel containing common salt in a solid state in such quantity that the 10 urine falling on it will always form a saturated solution, whereby all decomposition is arrested and consequently smell prevented. When the vessel is full it is removed to any suitable place, and the contents either used at once as manure or treated by filtration and evaporation to recover the excess of salt, which may be again used for the same 15 purpose. Though I have only mentioned common salt still other salts may be used, such as chlorides of magnesium and calcium or mixtures of the same.
